

Dear Dr. Sawyer:

As a consumer, I want to have the choice to use **cleaner, cheaper, domestic electricity** to power my car. It is time for CARB to do everything in its power to promote plug-in cars, including **plug-in hybrids** and **all-electric battery cars**. Grid-connected cars can make an extraordinary contribution to reducing toxic and greenhouse gas emissions and lowering our dependence on petroleum. The ZEV mandate has already proven the technological and economic viability of all electric cars. CARB should do everything possible to expedite and facilitate the availability of **electric cars** and **plug-in hybrids**.

Sincerely,

Susan Blanchard SUSAN BLANCHARD
